

IN THE CLAIMS:

Please amend claim 11 to read as follows:

1. (original) A solid oxide fuel system component which is adapted to be exposed to an oxidising atmosphere in the fuel system system and which is formed of a heat resistant alloy having a composition, in wt%, of:

Al 5.0-10.0

Si 0.1-3.8

Mn  $\leq$  0.5

Cu  $\leq$  0.23

Ni  $\leq$  0.61

C  $\leq$  0.02

P  $\leq$  0.04

S  $\leq$  0.04

Cr  $<$  5.0,

and residue Fe, excluding incidental impurities.

2. (original) A solid oxide fuel system component according to claim 1, which contains no more than about 8.5 wt% Al.

3. (previously amended) A solid oxide fuel cell system component according to claim 1 which contains less than 0.05 wt% Mn.

4. (previously amended) A solid oxide fuel cell system component according to claim 1 wherein the alloy has a composition, in wt%, of:

Al  $6.0 \pm 1.0$

Si  $1.0 \pm 0.5$

C 0.005 - 0.02

P  $\leq$  0.04

S  $\leq$  0.04

Cr  $\leq$  0.10

(Al + Si) = 6.5 to 7.5

Residue Fe, excluding incidental impurities.

5. (previously amended) A solid oxide fuel cell system component according to claim 1 wherein the alloy contains no Cr.

6. (previously amended) A solid oxide fuel cell system component according to claim 1 having a surface layer of  $\text{Al}_2\text{O}_3$ .

7. (original) A solid oxide fuel system component according to claim 6 wherein the  $\text{Al}_2\text{O}_3$  surface layer has a thickness in the range of from about 1 to about 10 microns, preferably from about 1 to about 3 microns.

8. (previously amended) A solid oxide fuel cell system component according to claim 1 wherein source material for the alloy at least includes scrap metal.

9. (amended) A solid oxide fuel cell system component according to claim 1 which is a gas separator disposed or adapted to be disposed between adjacent fuel cells in the system.

10. (amended) A solid oxide fuel cell system component according to claim 1 which is a component selected from the group consisting of a manifold, a base plate, a current collector strap, ducting, a heat exchanger and a heat exchanger plate disposed or adapted to be disposed in the solid oxide fuel cell system.

11. (currently amended) A solid oxide fuel cell system in which one or more components adapted to be exposed to a temperature in excess of  $750^\circ\text{C}$  and an oxidising atmosphere are in accordance with ~~any one of the preceding claims~~ claim 1.
